Blue = Provisional Red = Actual

User Story	Task	Story Points	Dependencies	Description	Details/Notes
U1	T1	3	None	Create a simple SQLite	Refer to ICare

			_					
				database that is able to store an ICare template, along with creating a corresponding schema	template () Since it is so large, it would make sense to split the data into multiple tables			
		The following are the names of the tables:  - Employment related - Community connection - Information and Orientation - Client Enrollment - Client Setup - Client Exit						
	T2	2	T1	Create script to take a .csv lCare template And dump it into the database	Refer to ICare template			
	Т3	3	T1	Create a method that will let the user pick which file has the to-be-uploaded data	Make sure the picker only allows .csv files to be uploaded			
U2	T4	3	None	Create a main menu with button to go to each widget	Buttons do not need to do anything yet			
	T5	5	None	Design a GUI with writable fields, labels for the fields, and a send button	For now the fields are all text, though some will need to be replaced with dropdown menus			
	T6	2	T1, T5	When the send button is clicked, create a method to send the data into the database				
U3	Т7	1	T5	Add a button called reset and create a method that resets all of the data in the template back to default				
U4	Т8	1	T6, T3	Add a button to take the user back to the				

				main menu screen, and add functionality to the main menu button to let the user get back to the form	
U5	Т9	2	T1	Create a method that will create an ICare template csv file that is output to the file using the state of the current database	
	T10	5	None	Create a GUI screen with buttons for the different ways to output the options	
	T11	2	None	Create a method that will let the user pick the name of the report and where it will be output	For the time being only allow CSV files to be output
	T12	1	T4, T8-T11	Allow the user to get to this screen from the main menu and back using the same button as T8	

Date: Oct 23 - Oct 29 Unit: 1 hour per story point

Red = actual

Blue = Provisional

User Story	Task	Story Points	Dependencies	Description	Details/Notes
U1	T1	2		Create database	done
	T2	4	T1	Login accounts	done
	Т3	5	T1	Schema	Leaving for later
	Т4	5	T1, T3	Upload data from csv file to database	Choosing a file was done through the GUI (it's on organization GUI)
	T5	5		GUI for login, upload data, Registration	See above, done
	Т6	1	T1-T5	Connect front end to back end	
U2	Т7	3	T1-T5	Get data from database and output to file	
	Т8	3		GUI for all levels of TEQ staff	This was done last week, I could make a menu for a TEQ staff to pick which level of user they wish to be
	Т9	2	T9, T8	Display data on GUI	done
	T10	1	T10	Connect front end to back end	
U3	T11	5	T5	Compare past data with what user uploaded in the past and confirm	
	T12	1	T11	Confirmation GUI	
	T13	1	T11-12	Connecting backend and frontend for confirmation GUI	
U4	T14	5	Т7	Retrieve specific data from database	

	T15	5	T14	Gui to filter what data is to be retrieved	
U5	T16	1	T2	Confirm accounts by TEQ and add confirmation boolean to every account	
	T17	1	T16	GUI for confirming account	
	T18	1	T16-17	Connect frontend and backend	

Date: Nov 6 - Nov 11 Unit: 1 hour per story point
